

materials for metallurgical sintering process

Our experience ensures the best solutions...

*Specialists in advanced materials for use in
high-temperature furnaces and powder
metallurgical sintering process.*

Carbones y Sistemas, S.L.L.

C/ Av. Los Pocillos, 10

Nave 1 - P.I. La Carrehuela
28340 Valdemoro (Madrid)

Tel.: +34 91 895 38 80

Fax: +34 91 809 23 46

applications

slab - plates

- Support plates for sintering pieces.
- Designed for use in sintering processes.
- Materials: Graphite, Alumina, Composites, Cordierite, Corundum, Molybdenum, SiC, etc.

trays - crucibles

- Trays and crucibles for sintered pieces.
- Designed for use in sintering processes.
- Materials: AiSi-314, Alumina Composite, Molybdenum, SiC, etc.

furnace construction

- Heating elements, furnace linings.
- Insulators and muffles.
- Materials: Alumina Oxide, Molybdenum, SiC, Tungsten, etc..

kiln rollers

- Rollers, protection sheaths, profiles
- Loading system, profiles. support tubes
- Materials: Alumina Oxide, SiC, etc.

For other applications, please contact us

materials

alumina oxide

FEATURES

- Wear resistant
- Corrosion-proof
- High mechanical strength
- Good insulation properties
- High temperature resistant

silicon carbide

FEATURES

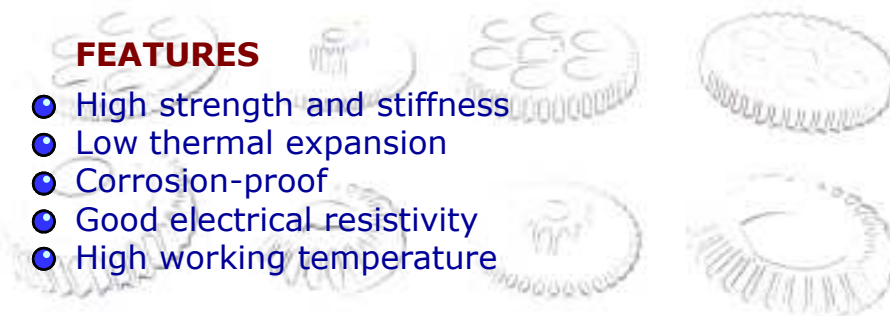

- High hardness
- Corrosion-proof
- High mechanical strength
- Good thermal shock
- Good thermal conductivity

molybdenum

FEATURES

- High strength and stiffness
- Low thermal expansion
- Corrosion-proof
- Good electrical resistivity
- High working temperature

graphite

FEATURES

- Good self-lubricity
- Corrosion-proof
- Low friction coefficient
- Good thermal shock
- Low thermal expansion

for further information please request physical properties sheet

furnaces

vacuum furnaces

① Structural elements made of carbon fiber-reinforced carbon CFC

② Rigid graphite and carbon felt for thermal insulation

③ Graphite heating elements and heating system

④ Lining and structural elements in graphite

⑤ Sliding, support and charging plates made in graphite

⑥ Structural elements made of stainless steel

for further information please request physical properties sheet

furnaces

sintering furnaces

Carbosystem supply a variety of furnaces refractory pieces and heating elements for sintering furnaces used to process powder metallurgy (PM) and metal injection molded (MIM) parts.

Two kinds of furnaces are mostly used for sintering PM or MIM parts and the heated is using either resistance heating elements or gas fired burners:

Mesh-Belt Furnaces:

These furnaces are often used to sinter ferrous PM parts at a temperature around 1.120 °C in a controlled nitrogen / hydrogen atmosphere.

We advise use SiC muffles and graphite+anti-oxidation impregnation or mullite materials for support / trays to sintering pieces

Pusher Furnaces:

These furnaces are often used to fire stainless steel at a temperature around 1.120 °C in a very dry hydrogen atmosphere.

We advise use SiC muffles and graphite+anti-oxidation impregnation, SiC, corundum or alumina materials for pusher pieces.

Mesh-Belt Furnace Scheme

Pusher Furnace

furnaces

sintering furnaces

SiC Muffles

SiC Support Muffles

Support, Trays, etc.
in several materials

Thermocouples Sensor type "S" in ZrO₂

Heating Elements and alumina support

materials for metallurgical sintering process

quality and service

- *Advanced materials*
- *We help improve your process*
- *We help increase your production*
- *We help reduce your costs*
- *We offer you the best price, technical support and quality*
